ARTEM SOTNICHENKO

Senior Frontend Engineer | Georgia, Tbilisi | moetazaneta@gmail.com | linkedin.com/in/moeta | t.me/tem_kg

About Me

Senior Frontend Developer with over 5 years of experience specializing in FinTech, SaaS, and MedTech. Focused on design systems, frontend architecture, performance, quality gates for agent infrastructure. Proven track record of delivering high-impact features, demonstrated by cutting Typescript build from 40 min to 2 min at TradingView. Adept at modernizing legacy systems, having led a full migration from a Vue 2 monolith to a Vue 3 micro-frontend architecture.

Experience

TradingView **12 months | Nov 2025 – Present**

Global charting platform and social network for 50M+ traders and investors.

- Led the native implementation of the Broker Selection screen in the mobile app, collaborating with several mobile teams, improving user satisfaction by ~10%.
- Led the order presets storage migration, ensuring existing presets were preserved while improving loading speed by ~100% and reducing storage usage by ~5%.
- Built and supporting internal company tools: Planning poker, Diff viewer.
- Conducting technical interviews as part of the recruitment process.
- Participated in AI adoption: introduced skills and practices, working on the team's quality gates and workflows to reduce human in the loop of our tasks.

Saritasa **3 years 11 months | Jan 2022 – Nov 2025**

US-based custom software development company delivering solutions for SMBs and enterprises.

Company-Wide Initiatives & Mentorship

- Initiated and built a company-wide shared solutions repository (React/Vue components, Figma assets), cutting average feature development time by ~20% across 10+ client projects.
- Mentored and onboarded over 10 junior developers and interns, creating personalized development plans that accelerated their ramp-up time and contribution to project goals.

Project Highlight: Urban Infrastructure Platform

- Architected and delivered a unified design system from scratch, enabling a large-scale rewrite of the main application and ensuring visual consistency for all future development.
- Optimized performance of critical React data tables by 40% (from 7s to <5s) by implementing virtualization and memoizing selectors, directly improving usability for data analysts.
- Designed and launched an interactive map feature using @vis.gl/react-google-maps, allowing users to visualize complex datasets with custom filters and shareable public links.

Project Highlight: Healthcare Legacy System Modernization

- Led the migration of a 6-year-old monolithic application (jQuery, Vue 2, Vuex) to a modern micro-frontend architecture using Vue 3, TypeScript, and Pinia.
- Improved codebase stability by introducing a modern toolchain: implemented TypeScript for type safety, set up CI/CD pipelines with GitHub Actions for automated builds, and enforced code style with ESLint.
- Formed an onboarding plan, wrote project documentation, and implemented one command setup, which reduced the time to integrate new developers into the project from 5 days to 2.

Project Highlight: ERP/CRM Applications

- Cut initial page load time by over 50% by reducing the main bundle size by 66% (from 1.5MB to 500KB) through code splitting and asset optimization and tuned Google Web Vitals (LCP −50%, FCP −12%, CLS −100%)
- Initiated API code generation practice for several frontend apps, reducing time for new features by 5-20%

Break **12 months | Jan 2021 – Dec 2021**

- Focusing on university

Sibdev **5 months | Sep 2020 – Jan 2021**

- Audited and resolved many UI inconsistencies between Figma designs and the production app, establishing a pixel-perfect standard and documenting guidelines for the team.

- Refactored and shipped 5+ new components for a shared UI library used across multiple teams, improving code reusability and development speed.
- Implemented i18n localization using the vue-i18n library, enabling the application to support multiple languages and expand into new markets.

Skills

Languages: TypeScript, JavaScript (ES6+), Node.js, Go
Frameworks/Libraries: React, Next.js, Redux, Zustand, Vue, Nuxt.js, Pinia, Angular, RxJS
UI & Styling: MUI, Shadcn, Vuetify, Tailwind CSS, SCSS, CSS Modules, Framer Motion
Testing & Tooling: Jest, Vitest, Playwright, Webpack, Vite, Docker, GitHub Actions

Education

Siberian Federal University
Bachelor of Arts, Computer Software Engineering — Sep 2018 – Jul 2022
